

Entity Registration and Application System

PraxisKZN
SOLUTION BRIEF

From entity registration to permit issued — one rules-driven system.

ERaAS gives enterprises and authorities a single, customisable platform to register entities and to receive, process and issue permits online — with the rules for every entity type and permit type defined by your own administrators, not by developers.

Whether the applicant is a company, an NPO, a trust or an individual, ERaAS adapts the registration journey — the data captured, the interfaces checked and the documents required — to the entity type. Permit applications follow the same principle: every permit type carries its own configurable rules, from mandatory fields to fees.

BUILT FOR

Regulators & authorities
Municipalities
Licensing bodies
Industry associations
Supply chain onboarding

WHAT ERAAS DELIVERS

Any entity type

Companies, NPOs, trusts and individuals — each with its own data, checks and document requirements.

Rules your admin owns

Administrators specify which interfaces are checked and which documents are uploaded per entity and permit type.

Verified at source

Registrations auto-checked and auto-completed against CIPC; tax clearance verified with SARS.

Paid or free permits

Permit fees integrate with payment portals and your accounting systems — or issue permits at no charge.

Full audit trail

Every data change, user registration and login is recorded, with audit reports, queries and extracts.

Role-based access

User access is controlled by role, with OTP-secured login and a user-driven query and extract facility.

INTEGRATES WITH

CIPC (DTI)

SARS tax clearance

Payment portals

Accounting systems

Email & SMS

HOW IT WORKS

A guided journey for every applicant

01

Register as a user

Secure sign-up with OTP confirmation of mobile and email, captcha bot protection and a confirmation email.

02

Register the entity

Choose the entity type; CIPC-registered details auto-complete, ID numbers validate, and required documents upload.

03

Apply for a permit

Pick the permit type and follow its configured pages, uploads and fees. Save, edit and re-submit as needed.

04

Track and receive

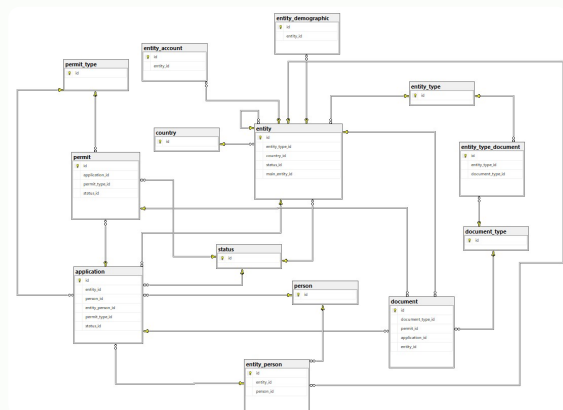

Applicants track application status and approved permits; back-office users filter by type, date, applicant and status.

A SOLID DATA FOUNDATION

Designed around your entities, not bolted on

At its core, ERaAS models the real relationships between entities, people, applications, permits and documents. That single relational model is what makes the rules engine possible — one place to define entity types, permit types, document requirements and statuses.

- Entities linked to their people, accounts and demographics
- Document requirements driven per entity and permit type
- Status tracked consistently across applications and permits

The ERaAS entity relationship model

Available now

User registration · Entity registration · Permit application, editing and tracking · Back-office views · Audit and reporting

On the roadmap

Entity registration approval workflows · Permit application approval · Multiple users per entity

Minimal customisation

Go live with online permit applications quickly — both processes are rules-driven, so configuration replaces custom development.
