Sandton City, Johannesburg

A Supply Chain Management

CASE-STUDY

The Requirement

The City of Tshwane had been having issues with their procurement systems. A combination of manual and electronic processes resulted in the City losing large amounts of cash to fraudulent SCM processes.

A solution needed to be found that was robust, transparent and auditable.

The Challenges

- **Loss of cash needed to be stopped**
- **Clearer idea of what was to be procured had to be gained**
- **System needed to be able to pass audits at short notice**
- **Manual processes which lent themselves to fraud needed to be eliminated**

Strategic Response

- **Comprehensive Market Analysis for suitable solutions**
- **Acquisition process embarked upon**
- **Praxis-SCM web chosen**

The Engagement

- **The teams spent six months aligning the business requirement to the proposed system and changes**
- **The engagement was a cyclic process that resulted in a comprehensive specifications document**
- **The base system was then aligned to the changes and the support and training structures were implemented**

Results

- **Fully automated procurement**

The engagement resulted in a fully automated procurement solution that was auditable and functional

- **Audit Excellence**

Over the 7 years of operation there has been no system audit irregularities.

- **Loss of cash stopped**

System resulted in no leakages of cash
Fraud stopped and managed
